# HOW INSURANCE FITS INTO YOUR BUSINESS' STRATEGIC PLAN

**T**he ultimate goal of any business' strategic plan is usually to build wealth for its owners. Such plans most often focus on the business operation itself. After all, if a business fails to function as a valuable, profitable entity, other concerns can quickly become irrelevant.

But a successful business (or one hoping to become so) must also make an effort to tie together its planning strategies with the income and estate planning goals of its owners and key executives. A business that ignores these considerations may miss a great opportunity and open itself to problems that threaten continued growth and, ultimately, survival.

With the third highest tax cut in U.S. history now in effect, the coming year promises to be one of significant savings for many taxpayers. Even better, many new provisions of the Jobs and Growth Tax Relief Reconciliation Act of 2003 (JGTRRA) and its 2002 predecessor, the Job Creation and Worker Assistance Act, will enable individuals and businesses to reduce taxes for years to come. At a time when the economy has given us relatively little to cheer about, this is good news indeed.

This book identifies a range of considerations — including JGTRRA — that businesses can integrate into their planning

strategies. By taking time to review these issues, a business owner can help fulfill the financial needs of both the business and its key executives.

## **DOES PLANNING REALLY MAKE A DIFFERENCE?**

Each business has its own particular needs, which change as it grows and evolves. Two of the most important are offering benefits that serve as incentives to key employees — both within and outside the ownership group — and providing for a financially smooth succession by funding buy-sell agreements.

At the same time, business owners and executives have their own special needs, which undoubtedly also change with time. These needs include finding ways to pass on to their heirs the most money at the least tax cost.

Chart 1 shows the value a business must create under alternative tax scenarios if its owner plans to leave \$1 to his or her heirs. Although it provides an overly simplistic analysis, it illustrates how the differences among income and estate tax alternatives can affect the bottom line. Owners who fail to take advantage of the many income and estate tax savings options must build up much greater value to achieve the same results. Remember that under current law, the estate tax repeal will be in effect only in 2010, so depending on it to solve your estate tax problem is not wise. For more on the gift and estate tax law changes, see page 20.

Chart 1

## Income needed to build a dollar of wealth for your heirs\*

	INCOME SUBJECT TO			
	All taxes	No corporate level income tax	No corporate level income tax, no estate tax	No taxes
Income earned by business	\$3.55	\$3.02	\$1.54	\$1.00
Top corporate level tax (35%)	(\$1.24)	—	—	—
After-tax income	\$2.31	\$3.02	\$1.54	\$1.00
Shareholder level income tax (15% on corporate dividends, 35% on ordinary income)	(\$0.35)	(\$1.06)	(\$0.54)	—
To shareholder after tax	\$1.96	\$1.96	\$1.00	\$1.00
Estate tax (maximum 48% rate in 2004)	(\$0.96)	(\$0.96)	—	—
<b>Remaining to heirs</b>	<b>\$1.00</b>	<b>\$1.00</b>	<b>\$1.00</b>	<b>\$1.00</b>

### WHAT ROLE DOES INSURANCE PLAY?

In many instances, life insurance can play an important role in all of these planning decisions. You can use it to create an overall key-employee benefits strategy, to develop a business succession plan, and to integrate retirement and estate planning for owners. In addition, the unique and favorable treatment life insurance enjoys under the tax law may present other valuable opportunities.

This book will provide you with some new ideas and jog your memory about some issues that may have faded into the background over time. It certainly doesn't replace personalized, professional advice. Congress is continually weighing

changes to income, as well as gift and estate tax laws, which may materially affect some of the strategies discussed here. To ensure both that you tailor each approach to your specific needs and that your plan is completely up to date with the most recent tax laws, seek professional advice before implementing any of the ideas we described.

Call us today to find out more. We can work together with your other professional advisors to create a plan that fits your personal goals and those of your business, or to refine or expand on the strategies you already have in place.

## WEIGHING YOUR BUSINESS STRUCTURE

**a**nyone starting a business today has an increasing number of structures from which to choose. And with the check-the-box rules, you can select whichever one you want without worrying about the complicated four-factor test that once applied. Selecting the one that will best suit your needs involves weighing the advantages and disadvantages of each.

Your options fall into three categories:

- Those that “pass through” taxation to the individual owners without liability protection (sole proprietorships and general partnerships),
- Those that pass through taxation with liability protection (limited partnerships, limited liability companies [LLCs], limited liability partnerships [LLPs] and S corporations), and
- Those that are taxed as a separate entity with liability protection for shareholders (C corporations).

The advantage of pass-through status is that income tax is generally paid at the shareholder level only. In contrast, C corporation income tax is paid at both the

corporate and the shareholder level. Dividends are paid from funds that have been taxed at the corporate level, and shareholders pay tax on the dividends they receive. And even though the second

tax on dividends is now reduced to 15%, it's still an additional level of tax. To avoid this double tax on amounts that exceed reasonable salaries, a C corporation may retain earnings. But if it does so without a business purpose — other than avoiding tax on the dividends — the IRS may assess an additional accumulated earnings tax.

### *Planning tip 1*

### **LIMITED LIABILITY COMPANIES' POPULARITY EXPLODES**

In recent years the IRS recognized that a properly structured LLC could be taxed as a partnership. Meanwhile, this new business form has exploded in popularity, and all 50 states recognize it. An LLC provides the advantages of an S corporation while avoiding its restrictions and limitations. And today, many states allow single-member LLCs to be treated like a sole proprietorship and don't even require them to file an additional income tax return. Thus, single-member LLCs can be the simplest form of liability protection.

For many existing corporations that have built up value, the LLC form is not a viable option because the conversion is a taxable event, often carrying with it a substantial tax cost. However, existing entities may be able to use the LLC form for new ventures within their businesses, or for joint ventures with other businesses.

As the owner of an existing business, you may want to review your business structure periodically to weigh its advantages and disadvantages and how they relate to your company's future profitability and your objectives. Even more important, you need to know how these advantages and disadvantages offset each other.

## **INCOME TAXES**

The tax code used to favor corporations at higher levels of taxable income, but JGTRRA has changed that. The top individual tax rate and the top corporate rate are now the same, at 35%.

At lower income levels, the C corporation (with the exception of personal service corporations) may also have an advantage because it can benefit from lower corporate rates on the first \$75,000 of taxable income.

But income tax considerations go beyond a comparison of the top federal income tax rates. First, you must also consider the impact of state income taxes in the various states where your company does business. In some states, the combined federal and state rates may be higher for C corporations while in others, individuals are still taxed at higher rates.

Second, a different income tax consideration applies to businesses that are expecting losses. If owners have enough tax basis in the entity, organizing as an S corporation, LLC or partnership may be beneficial. Why? Because these entities allow losses to be passed through to the owners. Thus, owners

may realize current tax savings by taking the losses individually. A new C corporation, on the other hand, generally can only carry forward losses against future corporate income.

Finally, you need to consider whether income or loss that is passed through to an owner is active or passive. Passive losses are deductible only against passive income or when the passive activity is disposed of. Generally, if an owner does not materially participate in the business (according to certain participation tests), the income or loss is passive.

If a business could generate passive income for any owner, a structure that allows pass-through treatment can be advantageous because it may allow the owner to deduct passive losses from other activities.

stock increases, reducing or eliminating their capital gain on a sale.

For example, assume a sole owner of an S corporation has an original investment of \$100,000. The business retains earnings of \$500,000 over a period of years, so the owner's tax basis increases to \$600,000. If the owner then sells the company's

Conversely, if a business generates passive losses for any owner, pass-through treatment may be a disadvantage because the owner may not be able to currently deduct the losses. By contrast, a C corporation is not subject to the same passive loss limitations.

### **SALE OF THE BUSINESS**

The way you structure your business has implications that affect how you will be taxed if you sell it later on. When considering these implications, you need to examine two areas: the impact on the shareholders and the impact on the corporation.

**Shareholder level.** A key advantage of a pass-through structure is that it may avoid or reduce any capital gains tax on the sale of a business interest. When an S corporation retains earnings over the years by earning income and not distributing all of it to shareholders, then shareholders' tax basis in their

stock for \$1 million, the owner's gain would be \$400,000.

In contrast, if the business is a C corporation, the gain would be \$900,000 because the owner's tax basis would remain the \$100,000 initially invested. In general, the current maximum tax rate on long-term capital gains (for assets held longer than 12 months) is 15%. The tax law reduces the capital gains tax to a maximum 14% on investments in qualified small businesses, but this only applies to original issue stock of certain C corporations purchased after Aug. 10, 1993, and held for at least five years.

The capital gains question has another side. If an owner plans to keep the business in the family and bequeath his or her interest at death, the capital gains tax may never apply. Currently, when heirs sell inherited property, they don't pay capital gains tax on appreciation that occurred before their

loved one's death. But when the estate tax is repealed in 2010 under EGTRRA, this step-up in basis will be limited to \$1.3 million plus another \$3 million for assets going to a spouse. The limits are adjusted for built-in losses and loss carryover amounts. The law is complex; consult your advisor on how this might affect your estate plan.

**Corporate level.** On a sale of C corporation assets, there may be a substantial corporate level tax if they are sold for more than their tax basis. Take an example of a building that was purchased for \$1 million and depreciated over a period of years, reducing the tax basis to \$400,000. If the building is sold for \$2 million, the corporation pays tax on a gain of \$1.6 million. If the corporation is then liquidated, the shareholders pay a second level of tax. In contrast, an S corporation usually pays no corporate level federal tax, and sole proprietorships, partnerships and LLCs never do.

## FRINGE BENEFITS

The cost of providing many fringe benefits is a deductible business expense, regardless of your business structure. But if your business is an S corporation, LLC or partnership, the cost of certain benefits provided to most owners (except S shareholders owning less than 2%), is taxable to the owners.

## FICA TAX

The elimination of the wage cap on the Medicare portion of FICA taxes hits general partners, or LLC members who work in the business, especially hard. Their entire share of business income — whether paid out or not — is subject to a 2.9% Medicare tax.

The FICA tax rules create a tradeoff for C corporations. Many C corporation owners have preferred to take money out of the company as salary, to the extent reasonable, to avoid the double tax on dividends. But they are faced with an additional 2.9% charge for doing so.

The Medicare tax applies to all compensation paid to a shareholder-employee, but not to S corporation income passed through to shareholders. To reduce this tax, shareholders in some S corporations may want to keep their salaries reasonably low and offset this with increased distributions.

## CONTROLLING YOUR DESTINY WITH A BUY-SELL AGREEMENT

**b**uy-sell agreements can be powerful tools to help you control your business's destiny. These contractual agreements typically involve shareholders and their corporation or are executed between a shareholder and the other corporate shareholders. Partners or LLC members can also enter into buy-sell agreements.

A buy-sell agreement controls what happens to a business when a specified event occurs, such as a shareholder's death or disability. An agreement might provide that, when a shareholder dies, the corporation will buy back the stock (a redemption plan) or that one or more of the remaining shareholders will buy the stock from the deceased's estate (a cross-purchase plan).

### *Planning tip 2*

#### POTENTIAL BENEFITS OF A BUY-SELL AGREEMENT

Buy-sell agreements can be quite powerful. Among other qualities, a well-drafted agreement:

- Provides a ready market for the shares if the owner's estate wants to sell the stock after the owner's death.
- Sets a price for the shares. In the right circumstances, it also fixes the value for estate tax purposes.
- Allows a stable continuation of the business by preventing unnecessary disagreements caused by new, unwanted owners.

A well-drafted buy-sell agreement can help solve several estate planning problems for the owner of a closely

held business. An agreement also may help protect and preserve the business against internal squabbles, whether among family members or unrelated business owners.

A key issue with any buy-sell agreement is providing the buyer with a means of funding the purchase. Life or disability insurance often fulfills this need. Using insurance to fund a buy-sell agreement can give rise to several tax and nontax issues and opportunities.

Because shareholders typically expect a business's value to rise, the price under the buy-sell agreement will likely also change. Thus, funding through insurance must be adjusted over time and periodically reviewed to ensure adequate coverage.

#### LIFE INSURANCE AND INCOME TAX

Life insurance proceeds generally are excluded from the beneficiary's taxable income, whether the beneficiary is a corporation, another shareholder or a separate entity. An exception is the transfer-for-value rule, under which proceeds will be taxable if an existing policy was acquired for value by someone other than the insured or a partner of the insured, a partnership in which the insured is a partner, or a corporation in which the insured is an officer or shareholder.

This issue often arises when structuring or changing a buy-sell agreement using existing insurance policies. Be careful to structure the agreement so that the transfer-for-value rule will not have an impact; otherwise the amount of after-tax insurance proceeds will be reduced.

The other side of the income tax equation is that life insurance premiums are not tax-deductible in a buy-sell situation, even though they are being paid to accomplish a clear business purpose.

**REDEMPTION AGREEMENTS**

With a redemption agreement, the corporation itself buys back a shareholder’s stock. Thus, this type of agreement proportionately increases each remaining shareholder’s ownership. This may or may not be the desired result, because a big difference may lie between what each shareholder wants and what each will end up with under a redemption plan. If a proportionate distribution of shares is not the goal of your buy-sell agreement, you may want to use a more flexible cross-purchase plan.

A redemption does not provide the remaining shareholders of a C corporation with an additional tax basis in their newly acquired stock. Assume, for example, that two 50% shareholders each paid \$500 for their stock when they

started a business. When Shareholder One dies, his stock is redeemed for \$1 million. Shareholder Two (now the 100% shareholder) still has a tax basis of \$500 in her stock. By contrast, under a cross-purchase arrangement, Shareholder Two’s stock would now have a tax basis of \$1,000,500.

Redemptions also can cause a potential income tax problem for C corporations, because receiving life insurance proceeds, while not taxable for regular tax purposes,

Chart 2

Does a redemption produce the desired results?

Shareholder	Ownership before buyout	Hypothetical desired result	After redemption of the stock of A
A	45%	—	—
B	45%	90%	82%
C	10%	10%	18%

(each shareholder would have policies on the two others), while a business with six shareholders would need 30 policies. This need for multiple insurance policies, paid for outside of the business, creates the complexity that has traditionally been cross-purchase agreements' major drawback.

Of course, shareholders spend their own money every year for these insurance costs. Premiums will vary for each policy — sometimes significantly — depending on each

can result in additional tax under the corporate alternative minimum tax (AMT). When insurance proceeds are large in relation to a business's net income, the AMT could be substantial. This often occurs in shareholder buyouts.

individual's age and other insurance rating factors, as well as his or her ownership percentage. Such amounts can generally be paid as additional compensation to each shareholder, but to fully cover the cost, the additional compensation would have to be

"grossed-up" (see Chart 3).

### CROSS-PURCHASE AGREEMENTS

To avoid the potential pitfalls of a redemption plan, consider using a cross-purchase arrangement instead.

In a business with only two shareholders, a cross-purchase plan is

relatively simple: Each owner need only apply for and hold a life insurance policy on the other. As the number of shareholders grows, however, the number of policies involved increases dramatically. Three shareholders would need six policies

Chart 3  
Gross-up of additional compensation

Cash compensation	\$1,667*
Income and payroll taxes (40%)	<u>\$ (667)</u>
Net cash to shareholder	<b>\$1,000</b>

*\*For a \$1,000 insurance premium*

Yet in businesses with very disproportionate shareholdings, such as 90/10, it may not be fair to the majority shareholder if the company funds the insurance (either directly or through salaries). In such cases, the 90% shareholder would

effectively pay 90% of insurance costs on his or her own life and thus end up paying for most of his or her own buyout. You will need to closely examine the overall agreement's economics to understand how it will affect those involved.

In a cross-purchase agreement, the party who receives the proceeds should maintain the policy. The insured, however, is the one who will suffer if a policy lapses and leaves insufficient funds for the purchase of his or her share of the business. Yet many agreements fail to provide a means to notify the insured if premiums are not being paid. This problem can usually be solved by verifying that each policy owner has provided evidence to the insured that premiums have been paid and permitting the insured to pay premiums and then seek reimbursement.

### **WAIT-AND-SEE BUY-SELL AGREEMENTS**

Deciding between a redemption and a cross-purchase agreement can be difficult. There are many variables: Not only can the business's and shareholders' circumstances change, but so can the tax laws. The "wait-and-see" agreement offers more flexibility. Unlike other buy-sell agreements, the purchaser is not specifically identified. The shareholders, the business or both can

buy life insurance. When a shareholder dies, the business has the first option to buy the stock. If the business opts not to buy or to buy only some of the stock, the shareholders have the option to buy. The business must buy any remaining stock.

### **USING A PARTNERSHIP TO HOLD INSURANCE**

Partnerships have become an excellent way to address some of the issues with buy-sell agreements. The partnership can own — and handle the premium payments on — all policies. Because there is one central entity, only one policy per person is required. And because of a specific exemption, the transfer-for-value rule is not a problem. (This is not the case for trustee or escrowed agreements, under which a trust or escrow agent — rather than a partnership — holds all policies.) A clear business purpose, apart from the ownership of life insurance, must be shown for the partnership's existence.

## TAKING CARE OF THE KEY EXECUTIVE

**S**tockholders are scrutinizing executive compensation and benefits more than ever, especially when an economic downturn occurs. A business today, whether publicly or privately owned, is likely to need a direct link between the compensation package and the value it provides the employee. Deferred compensation plans, which enable companies to provide additional benefits to key executives, often are the best way to provide long-term performance incentives. Welfare benefit plans and other insurance arrangements can also be used to sweeten the compensation package.

### NONQUALIFIED DEFERRED COMPENSATION PLANS

The popularity of nonqualified deferred compensation plans has risen dramatically in recent years, especially among medium-size to large businesses. These plans' relative flexibility means that they are limited only by your compensation objectives and creativity.

Because a deferred compensation program is not qualified under tax law, its creation or funding doesn't create an immediate tax deduction

for the business. To avoid major ERISA requirements, nonqualified plans must be for a select group of management or highly compensated employees. This means that nonqualified plans are almost always a more cost-effective way to provide benefits to a small group of key executives.

As a result, you can tailor your program to fit the specific needs of the business and each executive. Common examples include:

- **401(k) excess plans.** These allow executives to defer plan amounts that they could have contributed to a qualified 401(k) were it not for qualified plans' nondiscrimination rules and compensation limits.

#### Planning tip 3

### KEY ATTRIBUTES OF A NONQUALIFIED DEFERRED COMPENSATION PLAN

- To avoid major ERISA requirements, nonqualified plans must be for a select group of management or highly compensated employees.
- Flexibility allows design for maximum employee incentive/retention.
- Deferral must be set in place before the compensation is earned.
- Amounts are deductible to the company when paid and income is taxable when received.
- Any amounts used to informally finance the benefits promised to participants must be reachable by the business's creditors.
- Distributions are not subject to the various penalties, restrictions and requirements that qualified retirement plans are.
- A life insurance contract can be used to informally finance the agreement.

- ***Supplemental executive retirement plans.*** These provide retirement benefits above and beyond those defined by qualified plans' limitations.

- ***Stock and phantom stock plans.*** These provide benefits tied to the business's overall performance.

- ***Other deferred compensation tied to the performance of individuals, smaller work groups or divisions.*** These can be based on any criteria and may differ for each plan participant. They contain vesting schedules and other restrictions on the availability of funds.

## **FUNDING DEFERRED COMPENSATION PLANS**

A key issue for any deferred compensation plan is the funding of future benefits (though a plan actually need not provide for any funding mechanism). Key executives generally want some security, however, that benefits will actually be paid.

An accepted practice, recognized by the IRS, is funding through what is known as a rabbi trust. The employer cannot have access to funds once they are contributed to a rabbi trust, but the business's creditors can. Thus, the plan's participants are protected unless financial disaster strikes the business.

Income tax implications of a rabbi trust include:

- Funds are not taxable to executives and are not deductible to the company until paid out of the trust, and
- Earnings within the trust are taxed to the company.

Life insurance can be an ideal financing vehicle for a nonqualified plan. It allows the company to invest funds, directly or through a rabbi trust, and get competitive returns that are sheltered from current taxation.

When the company or trust receives a death benefit, it incurs no taxable income. Of course, when benefits are paid out, they are deductible to the company and taxable to the recipient.

Using life insurance also can bolster participants' security. If a company refuses to pay premiums when due, the trustee could surrender the policies and generate cash to cover the benefits. This surrender would cause adverse tax consequences to the company, which may help ensure it continually pays the premiums.

*Planning tip 4*

**KEY-EMPLOYEE LIFE INSURANCE  
CAN PROTECT YOUR BUSINESS**

In addition to offering attractive compensation to key employees, businesses need to protect themselves in case they lose such employees. Key-employee life insurance replaces the earnings that may be lost if executives or other valuable employees die. But these employees must have a great impact on the business's profitability, such as a salesperson who has the sole working relationship with most of the major customers. This type of insurance policy helps the business sustain itself during the initial loss period while it finds and trains a replacement.

**EXECUTIVE BONUS SECTION 162 PLANS**

By using an Executive Bonus Section 162 Plan, you can distinguish among employee groups. This plan type is an insurance policy not wrapped in a formal "compensation plan." The employee acquires the policy him- or herself (ideally through an insurance trust as discussed below). The employer then pays the premium either directly or indirectly through an employee bonus.

This payment is deductible to the business as compensation, assuming total compensation is not unreasonably high. And the employee has a portable benefit that he or she can take to another job. This means that, while simple and effective, this plan may not be the best way to retain key people.

**GROUP TERM CARVE-OUT**

Many businesses have group term policies covering their employees. Such policies are cost-effective, particularly for larger groups, and are often the most appropriate means of coverage for the employee group as a whole. In addition, group term life enjoys a unique tax benefit: Premiums are deductible to the company while coverage of up to \$50,000 per person is a completely tax-free benefit to employees.

Including the company's key executives and shareholders in the group may not, however, make as much sense. Over the long term, this insurance may become very expensive and still leave you with nothing to take to retirement. And the above-mentioned special tax break? It works for everyone except the partner, the LLC member, or the 2% or greater S corporation shareholder.

Instead, it may be advisable to "carve out" certain individuals from the group and convert their policies to permanent insurance. This may better meet their estate planning needs and may not actually cost as much over a period of years.

## QUALIFIED RETIREMENT PLANS

**Q**ualified retirement plans offer many tax benefits for business owners and their employees, but are subject to many rules and limits. There are two basic types of qualified retirement plans, each with many variations, twists and features. The defined benefit pension plan is funded to provide a specified benefit at a specific retirement age, based on actuarial assumptions. The defined contribution plan specifies only the contribution going into the plan or, in the case of a profit-sharing plan, may leave contributions to an employer's discretion.

Beginning more than 20 years ago, the popularity of the defined benefit plan rose greatly, particularly for small but profitable businesses whose owners were in or approaching the second half of their working lives. In subsequent years, however, the defined benefit plan's popularity declined. Many such plans were, in fact, terminated. This shift resulted from tax law and regulatory changes, which slowly but systematically reduced the benefits of these plans by cutting down the amounts that could be contributed and increasing the overall cost to the business.

Then in more recent years, changes in the laws have swung back to become more liberal, resulting in a resurgence in popularity of defined benefit plans.

The last few years have also seen a shift away from employer-funded plans in general. In many cases, these plans have been replaced by 401(k) or other defined contribution plans that leave much of the funding responsibility to employees. EGTRRA has increased employee contribution limits, making defined contribution plans even more attractive. (See Chart 4 on page 16.) Today's plans are likely to provide for a more limited matching contribution (designed to encourage employee participation) as well as a lesser profit-sharing contribution from the employer. Despite these changes, a defined benefit plan can still be a powerful tax deferral strategy in the right situation.

### INSURANCE WITHIN A QUALIFIED RETIREMENT PLAN

From an income tax standpoint, the qualified retirement plan is not always the best owner for life insurance. The typical advantage of life insurance (death benefit proceeds free from income tax) is reduced when the policy is part of a qualified plan. On the other hand, tax-deductible dollars can be used to fund the premiums. Thus, it may still be the vehicle of choice depending on where you place the bulk of your money.

As a business owner — even one who may have substantial wealth — you probably have money tied up in some or all of the following:

- The business's assets,
- Qualified retirement plans or IRAs,

Chart 4  
Features of popular retirement plans

Plan type	Funded by	Contributions are tax-deductible	Maximum annual contribution/allocation
Defined benefit plan	Employer	Yes, to contributing employer	Contributions required to fund annual benefits, which can't exceed the lesser of \$160,000 (indexed) or 100% of includable compensation*
Profit-sharing plan	Employer	Yes, to contributing employer; maximum deduction — 15% of participating payroll	Lesser of \$40,000 per participant or 25% of includable compensation**
401(k) plan (part of a profit-sharing plan)	Employees; employers can fund matching contributions	Yes, to contributing employees and employers	Employee deferrals — lesser of \$11,000** or 25% of includable compensation*
SIMPLE plan	Employees; with matching or nonelective contributions by the employer	Yes, to contributing employers	Generally employee pre-tax salary deferral contributions of up to \$7,000**; employer matching of 3% of compensation or 2% nonelective
Individual Retirement Account (IRA)	Individuals	Yes, unless participant is covered by another plan and adjusted gross income exceeds certain levels	\$3,000** in most cases (now also increased to \$3,000 for nonworking spouses)
SEP IRA	Employer	Yes, to contributing employer	Lesser of \$30,000 or 15% of includable compensation* (13.043% of earned income for self-employed)
Roth IRA	Individuals	No	Lesser of \$3,000** (reduced by any non-Roth IRA contribution) or 100% of the individual's compensation for the year

\* Subject to \$200,000 maximum compensation limit as indexed for inflation

\*\* 2004 limit subject to adjustments under EGTRRA

Source: U.S. Internal Revenue Code

- Residences, vehicles or other personal assets,
- Other real estate, and
- Other investments you would not want to part with.

At the same time, your liabilities and responsibilities are free to grow like weeds. You may need to invest your cash flow back into business assets, fund your children's

or grandchildren's education, fund the retirement plans mentioned above, pay for weddings and, of course, support a comfortable lifestyle. Meeting these demands often leaves fewer funds available for long-term investments, including life insurance, than you would prefer to maintain.

Meanwhile, the qualified retirement plan you've been funding is sitting with liquid

Chart 5

## Retirement plan contribution limit increases

Year	401(k)s	401(k)s for taxpayers over 50	IRAs	IRAs for taxpayers over 50	SIMPLEs	SIMPLEs for taxpayers over 50
2002	\$11,000	\$12,000	\$3,000	\$3,500	\$7,000	\$7,500
2003	\$12,000	\$14,000	\$3,000	\$3,500	\$8,000	\$9,000
2004	<b>\$13,000</b>	<b>\$16,000</b>	<b>\$3,000</b>	<b>\$3,500</b>	<b>\$9,000</b>	<b>\$10,500</b>
2005	\$14,000	\$18,000	\$4,000	\$4,500	\$10,000	\$12,000
2006	\$15,000	\$20,000	\$4,000	\$5,000	\$10,000	\$12,500
2007	\$15,000	\$20,000	\$4,000	\$5,000	\$10,000	\$12,500
2008	\$15,000	\$20,000	\$5,000	\$6,000	\$10,000	\$12,500

Source: U.S. Internal Revenue Code

assets available for investment. Yet taking money from the plan may not make sense when you consider income tax obligations as well as the additional 10% early withdrawal tax that will generally apply if you are under age 59½. Instead, the answer to your particular situation might be to buy life insurance within the retirement plan.

If it makes sense to have insurance within the plan, you will need to address two key issues: Is insurance permitted under your plan and can proceeds be kept out of your taxable estate?

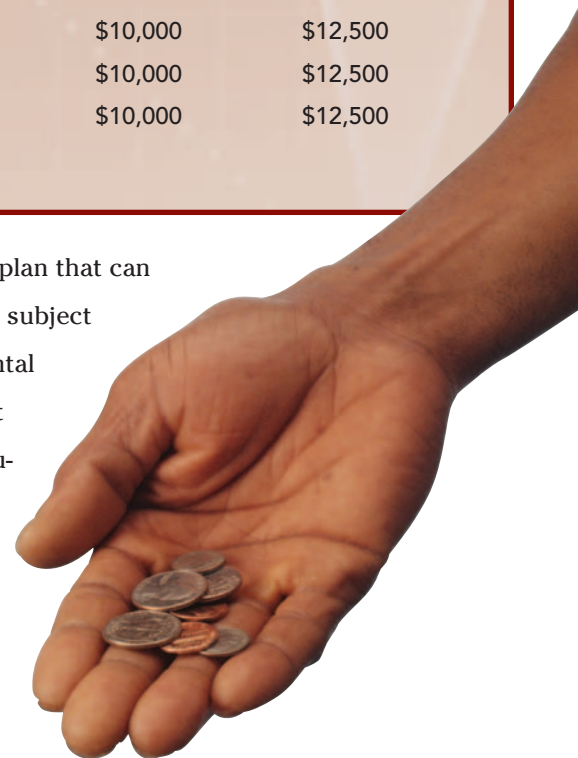

### CAN A RETIREMENT PLAN HOLD LIFE INSURANCE?

In general, profit-sharing plans, including 401(k) plans, may be used effectively for buying life insurance. Many profit-sharing plans permit these purchases at the participant's election. Including such a provision in a plan can be important because it will allow you to design a program that fits the needs of one key plan participant without doing the same for everyone.

The amount in a profit-sharing plan that can be used to buy life insurance is subject to what is known as the incidental death benefit rule. It states that anything up to 50% of the cumulative employer contributions to the account may be used to buy whole life insurance; up to 25% can be used for term insurance or universal life.

Although the rule's cumulative nature often allows enough room for planning, some exceptions can provide even more room. You can also simplify things by using all of any amounts that have been in the plan for at least two years, and you may use the entire account balance of any participant who has been in the plan for at least five years.

Bottom line: If you are aware of the restrictions, you should generally be able to accomplish your insurance goals within a profit-sharing plan. Other types of retirement plans, however, may not be as flexible.

### **KEEPING QUALIFIED PLAN INSURANCE PROCEEDS OUT OF YOUR TAXABLE ESTATE**

In general, all amounts in a qualified retirement plan are part of your taxable estate. Thus, proper planning is important to ensure that insurance proceeds won't become part of your estate. Otherwise it may face a larger than necessary tax burden. Remember, under EGTRRA the estate tax is repealed only for 2010. So for purposes of our discussion here, we will assume there will be at least some estate tax in effect at the time of your death. The ideal insurance policy to use within a profit-sharing plan may be a "second-to-die" type, which pays proceeds only after the death of both the plan participant and his or her spouse. These policies are typically designed as follows:

***If the participant dies first,*** the only amount included in the estate will be the policy's cash surrender value, because the proceeds are not yet payable. This is, in general, a relatively small amount. The policy should then be transferred to an irrevocable insurance trust designated by the participant. Transferring the policy to an insurance trust keeps the eventual proceeds out of the spouse's estate. The only cost comes from including the policy value (cash surrender value, not face amount) in the participant's taxable estate.

***If common disaster strikes,*** the estate plan should designate that the participant is

deemed to have died first. This will allow the same transfer to the trust and result as discussed earlier, sparing your remaining heirs estate taxes on the policy's proceeds.

***If the participant's spouse dies first,*** the participant should immediately remove the policy from the plan and transfer it by gift to an irrevocable trust. Distributing the policy to the participant results in income tax and a potential penalty tax. In the alternative, participants can buy the policy from the plan for its fair market value.

The participant must then live for at least three years after the transfer to the trust to keep the proceeds out of his or her estate. The transfer to the trust is a gift, measured by the policy's fair market value — generally the cash surrender value at transfer. Annual gift tax exclusions and the lifetime gift tax exemption can be used to minimize the transfer's gift tax burden.

### **DISTRIBUTION PLANNING**

Retirement plans have been excellent tax-advantaged investment vehicles for many years, and many businesses have taken full advantage of the opportunity to contribute large amounts and let them grow tax deferred.

The result is that today, in many closely held businesses, the owners and key employees who are nearing or have reached retirement age have built up very substantial sums within qualified retirement plans, including IRAs. The appreciation rate in the financial

markets through much of the last decade has meant that these retirement nest eggs have grown dramatically, even after the more recent downturn.

What is so terrible about this financial bonanza? Nothing, except for the income tax that will need to be paid, and likely the estate taxes, too. In a nutshell, qualified retirement plans are subject to federal income taxes at rates of up to 35% in 2004 and to state income taxes in some states. Even with certain deductions, and not counting any state taxes, the effective tax rate may be up to more than 70% before this money finds its way to the next generation.

If you plan to retire and live off your plan distributions, the total tax burden won't be so bad. But if you won't need all of your retirement plan funds, an important question arises: What can you do to lessen the overall income and estate tax burden on the money you will not need and will eventually pass on to your heirs?

The answers to this question are complex and should be analyzed on an individual basis. You will need to consider the amounts in your qualified plans and IRAs, your age, your spouse's age, your income needs, and your estate planning goals. Generally:

- If you or your spouse live a long life (to age 90, for example), you will almost certainly be better off if you postpone taking distributions until required, and then take the minimum required amount. As a general rule, deferring the income tax and getting additional

years of tax-deferred income and/or appreciation will yield the best results.

- If neither you nor your spouse live as long a life, a portion of the plan assets will probably end up being distributed directly to your beneficiaries — and will be taxable to them at their income tax rates. Consider whether this will create an advantage or a disadvantage.
- Even if you bet on living a long life, other factors could possibly shift the advantage toward taking money out faster and sooner (perhaps beginning in your 60s, rather than at age 70½). Such factors generally hinge on your ability to achieve estate planning goals that would not be possible without the use of this money, such as:
  - Using the funds (after paying income tax) to make gifts that qualify for annual gift tax exclusions or even establishing an FLP, or
  - Using the funds (after paying income tax) to purchase life insurance in an irrevocable life insurance trust (ILIT).

A projection of the after-tax amount left for your heirs will sometimes dictate taking the money out sooner than required if you will then be able to do something with it that will also save estate taxes.

You may have an additional option to roll over existing qualified plan balances or IRAs to a Roth IRA. This may be the best option of all, but you only qualify if your adjusted gross income is under \$100,000 and you don't file your tax return as married filing separately. You must also be willing to pay taxes on any previously untaxed contributions and the IRA's earnings up front.

## ESTATE PLANNING FOR THE BUSINESS OWNER

**b**usiness owners have several options to consider when planning to transfer their assets. Because estate taxes can be prohibitive, you need to investigate approaches that will maximize the level of value you retain while still providing you with some degree of control over, or continuing cash flow from, the asset being transferred.

By now you're probably well aware of the estate tax repeal under EGTRRA. And your first thought might have been, "Hooray! I don't have to worry about estate planning anymore." But if you read the details, you'll realize the repeal phases in slowly over the next several years. And because of a

"sunset" provision, in 2011 the estate tax will return unless Congress passes further legislation. (See Chart 7 on page 21.)

Chart 6

### Leveraging your gifts with a family limited partnership

	Gift of cash	Gift of an interest in an FLP	Difference
One annual gift tax exclusion	\$11,000	\$11,000	—
Hypothetical minority/marketability discount (e.g., 33⅓%)	—	\$5,500	\$5,500
Undiscounted value of assets transferred	\$11,000	\$16,500	\$5,500
Appreciation in value at 8% annually for 25 years	\$64,333	\$96,500	\$32,167
Value of gift after 25 years	\$75,333	\$113,000	\$37,667
Eventual estate tax savings at 45%	\$33,900	\$50,850	\$16,950

Source: U.S. Internal Revenue Code

In addition, EGTRRA includes other provisions that increase the complexity of estate planning, such as gradual repeal of the generation-skipping transfer (GST) tax; reduction in the top gift tax rate but no repeal of the gift tax; increases in gift, GST and estate tax exemptions; and repeal of the step-up in basis at death.

Chart 7

## Transfer tax rates, exemptions and credits under EGTRRA

Year	TOP TAX RATES		CUMULATIVE TAX-FREE TRANSFERS			Allowable state death tax credit
	Gift	Estate and GST	Gift	Estate	GST	
2002	50%	50%	\$1,000,000	\$1,000,000	\$1,100,000	75%
2003	49%	49%	\$1,000,000	\$1,000,000	Indexed	50%
2004	48%	48%	\$1,000,000	\$1,500,000	\$1,500,000	25%
2005	47%	47%	\$1,000,000	\$1,500,000	\$1,500,000	None
2006	46%	46%	\$1,000,000	\$2,000,000	\$2,000,000	None
2007	45%	45%	\$1,000,000	\$2,000,000	\$2,000,000	None
2008	45%	45%	\$1,000,000	\$2,000,000	\$2,000,000	None
2009	45%	45%	\$1,000,000	\$3,500,000	\$3,500,000	None
2010	35%	Repealed	\$1,000,000	Repealed	Repealed	None
2011*	55%**	55%**	\$1,000,000	\$1,000,000	Indexed	100%

\* If the repeal is not extended.

\*\* Excluding 5% surtax.

**Note:** Federal gift and estate taxes are unified so that a single progressive tax rate schedule, starting with 37% in 2001 and 41% in 2002, applies to your cumulative lifetime taxable gifts and transfers at death. (The minimum tax rate will increase as the exemption amount increases.) Lifetime taxable gifts are included even if you did not pay a gift tax because of your lifetime exemption.

**Source:** U.S. Internal Revenue Code

Finally, the \$10,000 annual gift tax exclusion increased to \$11,000 in 2002. The exclusion increases in \$1,000 increments, so it may not increase again for a few more years.

As a result, estate planning is more important than ever — without proper planning, your family could still lose to estate taxes a large share of what you've spent a lifetime building.

### FAMILY LIMITED PARTNERSHIPS

Are you looking for a way to save estate taxes and leverage your use of gift tax exemptions while protecting and maintaining control over the assets

you are giving away? If so, a family limited partnership (FLP) may be the perfect estate planning strategy for you.

*Planning tip 5*

## ARE YOU READY FOR A FAMILY LIMITED PARTNERSHIP?

Despite all the advantages of a family limited partnership (FLP), the approach is not for everyone. Are you ready to create an FLP? Answering the following questions can help you decide.

Are you concerned about estate taxes and looking for a way to maximize lifetime giving?

Are you willing to reduce the actual value of your estate? (Keep in mind that income and borrowing power may be reduced as well.)

Are you willing to have distributions made *pro rata* to all the partners, if they are made at all? (Distributions need not be made at all; alternatively, the partnership could distribute only enough for the partners to pay their income taxes. The general partner can also take a reasonable annual management fee from the partnership.)

Are you willing to incur some additional costs for legal fees, appraisal fees and annual partnership tax returns?

For decades, taxpayers had fought with the IRS in the courts over the concept of minority and marketability discounts in a family setting. Taxpayers were often successful in these disputes, but generally not without a fight, and a great deal of uncertainty remained about such discounts.

Then, in 1993, the IRS finally conceded the battle and agreed that discounts should apply in family situations. Ever since, the FLP has enjoyed great popularity. (The IRS continues to fight FLPs every step of the way, particularly if they're not structured or operated properly.)

The key to enjoying discounts is to use a vehicle, such as an FLP, that does not give the recipients control over the investment they end up owning. Of course, the discount's amount must be determined, ideally by a formal valuation, and will vary depending on the partnership agreement and the nature of the assets transferred to it. Discounts generally range from 20% to 40%.

In the typical FLP, the parents or grandparents making the gift become the general partners, while children and/or grandchildren become limited partners. The latter have neither control over the partnership's management or assets nor any personal liability beyond their interest in the partnership itself. Either all at once (using the gift tax lifetime exemption and perhaps even paying gift tax beyond that point), or over a period of years (using the gift tax annual exclusions), the parents may gift as much as 99% of the partnership to younger generations.

Various assets can be transferred to an FLP, including marketable securities, real estate or interests in closely held businesses. The partnership may become an owner in other partnerships, LLCs or C corporations (but still not S corporations).

The additional leverage that results from a gift's discount is demonstrated in Chart 6 on page 20. This scenario is based on the use of one annual gift tax exclusion of \$11,000. Of course, these tax savings can be multiplied

if you make many \$11,000 gifts each year for a number of years.

FLPs at least partially protect assets from outsiders. A limited partner's creditor or a divorcing spouse may be able to become a limited partner, but he or she may not be thrilled with an investment that an adverse party controls, that may not generate any cash flow, that can't be sold or borrowed against, and that may create substantial income tax responsibilities.

### GRANTOR RETAINED ANNUITY TRUSTS

It is safe to say that many of those who have not done so already would be happy to give away substantial assets to their children if not for three critical concerns:

- They do not yet feel comfortable parting with the income stream an asset generates.
- They are not sure whether their children can handle full control of, or full income from, an asset.
- They do not want to pay a large gift tax or perhaps even use up a big chunk of their lifetime exemption.

Interestingly, a grantor retained annuity trust (GRAT) can go a long way toward addressing all these issues. With a GRAT, you can make a substantial gift today while retaining an income stream for some period of time. You may also be able to keep control within a trust that may not have much of a net income stream after gradually paying you off and that may not pay out income to beneficiaries for even longer. And yet, a gift today that is relatively

#### *Planning tip 6*

### DEFECTIVE GRANTOR TRUSTS CAN BE EFFECTIVE\*

One popular planning strategy is the use of a "defective" trust. A defective trust purposefully contains one or more provisions that result in its being treated as a grantor trust for income tax purposes. This means that all the trust's income is taxed to the grantor on his or her individual return. It also means, for example, that you can sell an asset to the trust at a substantial gain but incur no income tax on the gain because, for tax purposes, the transaction is treated as a sale to yourself.

Meanwhile, this same trust, if properly drafted, will qualify as a separate entity for estate tax purposes. Therefore, the transfer to the trust will remove the asset from your estate. Although this may sound like an unintended quirk in the law — and perhaps it is — it has been recognized by the courts and has become an accepted estate planning technique.

What this means is that selling to a defective trust can accomplish similar results as gifting to a grantor retained annuity trust (GRAT). Payments are made back to the seller (grantor), typically over a period of years as an installment sale with interest.

*\* Source: U.S. Internal Revenue Code*

small for tax purposes can hopefully grow substantially over time.

A GRAT pays a predetermined amount, which may vary in size or duration, back to the grantor. It may be a fixed percentage of the original value or a percentage based on the trust's annually recalculated value. The annuity's term must be fixed at no less than two years.

The amount of the taxable gift is determined upon the initial transfer based on a government-derived interest rate factor. But the transferred asset must first be valued and, just as with an FLP, a minority or marketability discount may affect the asset's value.

The real impact, of course, is that you're making a gift with a built-in delay mechanism because of the annuity coming back to you. In the meantime, if the asset increases in value more than the government tables assume it will, you can get substantial gifting leverage.

For example, let's say you have a closely held business that you believe will grow 20% annually for the next five years. The business is worth \$2 million and you want to transfer 25% of it to a GRAT, taking an annuity for five years that is large enough to make the gift's value close to zero.

First, you would need to value the asset being placed in the GRAT. For instance, though 25% of a \$2 million business equals \$500,000, a discount may be taken because the GRAT is receiving a minority interest. If this discount is 40%, the value of the asset itself would be \$300,000.

The amount of the annuity necessary to reduce the gift to near zero will depend on government interest rates, which are adjusted monthly. Let's say, in round numbers, that the annuity to be paid back

to you might be \$75,000 annually (totaling \$375,000, or 125% of the discounted value, over the five-year period).

Indeed, the business might earn enough in net income each year (in this example, exactly 15% of its nondiscounted value) so that the trust could pay the annuity every year out of its cash flow from the business.

Thus, the results might be as follows:

- 25% of a \$2 million company is eventually transferred without any gift tax or use of the lifetime exemption.
- 25% of future appreciation in the business also will escape gift tax because the gift is being made now.
- The actual financial impact of the gift is delayed for five years because the trust has little or no cash flow during the annuity period.

*Chart 8*

**Amount of insurance needed at 48% to provide children with \$1 million after estate taxes**

	<b>In irrevocable life insurance trust</b>	<b>Owned by insured</b>
Insurance proceeds	\$1,000,000	\$1,923,077
2004 estate tax (48%)	\$ 0	(\$ 923,077)
After-tax proceeds	\$1,000,000	\$1,000,000

What could go wrong?

Not much:

- The IRS can adjust any gift's value, but with a properly drafted GRAT this won't necessarily cause a taxable gift. The trust can provide that such an IRS adjustment is "corrected" by giving back a portion of the transfer originally made to the trust.
- You always have the risk that, when a taxable gift is made, you will have wasted the exemption or annual exclusions if the asset's value declines. But in a GRAT similar to the above example, that risk is small because the taxable gift is minimal.
- You (or you and your spouse) could die before the annuity term's end. The transfer to the trust will not be effective for estate tax purposes unless you outlive the annuity term. This is an issue that certainly can be addressed with life insurance.

## **IRREVOCABLE LIFE INSURANCE TRUSTS**

Buying life insurance via an ILIT will typically allow for a tax-free death benefit.

Life insurance in an ILIT will normally remain outside the insured's estate.

However, the purchase and/or transfer of the policy should be handled with care to avoid incidents of ownership. You will need a lot more insurance — more than

### *Planning tip 7*

## **GETTING AN EXISTING INSURANCE POLICY INTO THE TRUST**

What if you want to move an existing insurance policy to an irrevocable life insurance trust (ILIT)? This may not be easy if the policy isn't a term policy. If it has been around for a while, the policy's cash surrender value may be high enough that the transfer would create a large gift, using up not only your annual gift tax exclusions but a portion of your lifetime exemption as well. You must also survive the gift of the insurance policy to the trust for three years to keep the proceeds out of your estate.

If the trust buys the policy, you may run afoul of the transfer-for-value rule and subject the eventual proceeds to income tax. One exception to this rule allows a transfer to a partner of the insured. Interestingly, that partner can own a very small interest (there is no minimum percentage) and there need not be a connection between the insurance and the partnership. As a result, one strategy is to make the insurance trust a partner in an FLP, thereby qualifying for this exception.

twice as much, in fact — to provide the same benefit to your family if the proceeds must first be used to pay an estate tax of as much as 48% (in 2004 and falling to 45% by 2007 — see Chart 7 on page 21).

If you own life insurance policies when you die, the proceeds are includable in your taxable estate. Ownership is determined not only by whose name is on the policy, but also by who controls certain rights, such as the right to change the beneficiary. The solution? Be sure you are not considered the owner of insurance on your life.

Instead, create an ILIT. The trust owns the policies and pays the premiums. You can make a gift to the trust every year so that it has the funds to pay premiums. And, if properly structured, these gifts can qualify for the \$11,000 gift tax annual exclusion.

When you die, the proceeds pass into the trust and are not included in your estate, nor will they be included in your spouse's estate (although the trust can be — and generally is — structured to provide benefits to a surviving spouse as well as other beneficiaries).

Is there any reason not to use a trust to hold insurance on your life? Generally no, but certain situations may preclude this approach. Insurance that provides funding for a buy-sell agreement will be held by another individual or entity. Policies can be owned by the insured's adult children rather than a trust. And if your estate, including insurance, is small enough that you don't need to be concerned about estate taxes, you can be spared the complication. Finally, if you believe you will need to access the policy's cash value, ownership in a trust can complicate the situation. In general, ILITs have quite understandably become an integral part of many people's overall estate plan.

## CHARITABLE REMAINDER TRUSTS

A properly structured charitable remainder trust (CRT) provides you with several benefits:

- You can avoid paying capital gains tax on the sale of an appreciated asset. When the trust sells an asset, it pays no tax on the gain.
- You get a partial charitable income tax deduction when you fund the CRT. The amount of that deduction is based on interest-rate-sensitive government tables. The present value of the interest eventually going to charity must be at least 10% of the total.
- The CRT pays you income during its term (which can be for the remainder of your life). You will pay income tax as you receive funds from the trust. Your investment yield may actually go up because the CRT can sell a highly appreciated — but low yielding — asset without paying tax and replace it with another, more suitable investment.

### Planning tip 8

## CHARITABLE TRUSTS AND S CORPORATIONS: A GOOD MATCH?\*

Charitable trusts and foundations can now be shareholders in S corporations. Thus, you can now get an income tax deduction for contributing S corporation stock.

Doing this, however, can be quite complicated and may not work favorably. Someone, either the trust or a beneficiary, will have to pay tax on the trust's share of S corporation income and gains. As long as the trust gets enough cash flow to pay its share of the tax, though, the charitable organization should still be very happy to receive the gift.

\* Source: U.S. Internal Revenue Code

Although not immediately, a CRT also provides a substantial benefit to the charity, because it will someday end up with the remaining balance in the trust. Yet you may still retain almost as much (possibly even more) for yourself and your heirs as if you had kept the asset, because of increased cash flow during the trust's term and an immediate tax deduction.

The risks? Your death at an early age (if income was being paid for your lifetime) could trigger an earlier transfer to the charity and many years' less income for your family. Or, you may enjoy a long life, but suffer a financial

downturn. The solution may be to use some of the income stream from the CRT to buy life insurance. It will provide you or your heirs with an additional source of funds.

This is an example of how life insurance can round out a great strategy. Adding the life insurance policy can help you turn your CRT into a "win-win" situation.

## PREPARING FOR THE FUTURE: A BUSINESS OWNER'S CHECKLIST

As you can see, planning for your future and the future of your business involves making many choices. This checklist can help you assess your needs and determine the best plans you can lay for the future. If you would like more information on any of the areas we've discussed in this guide, mail or fax these two pages (or copies of them) back to us. We can help you create a plan that will best suit both your needs and the needs of your business.

### BUSINESS STRUCTURE

- Have you considered all the advantages and disadvantages of each type of entity and how each could apply to your business?
- Would the new S corporation rules allow you to now use that business structure where it was previously not feasible?
- Can new shareholders now be brought into an existing S corporation because of the tax law change?
- Can an LLC be used for a new business structure or a new portion of your existing business?

Yes	I would like to consider it	I need more information

INSURANCE SERVICES SINCE 1974

CPS Insurance Services is celebrating 30 years of service to brokers. Our commitment to you is to continue to mix the latest technologies, with years of knowledge and service expertise. CPS is a major player in the advanced case market — with an in-house advanced planning and tax attorney providing expert guidance in advanced estate planning, investment strategies, corporate and personal tax planning, charitable trusts, benefits design, deferred compensation planning, corporate financial planning, as well as strategies for retirement and wealth management.

Knowledge of the products is only one facet of advanced case design. At CPS, we utilize two in-house underwriters with a combined 50+ years of impaired risk underwriting experience, to ensure your client is receiving the best possible rating. CPS' proven *Quick Quote® Underwriting System* will help obtain a tentative medical quote and price range for your client. Our back office support system, to process your business; a high level of product knowledge; and years of underwriting experience, are just some of the reasons why CPS has been a leader in the insurance industry since 1974.

With access to more than 60 products from 20 highly rated carriers, CPS' comprehensive Annuity Department can assist you with all of your fixed, indexed, variable and single premium immediate annuity needs. This includes all case design, illustration, contracting and case issuance services, as well as advanced sales support and compliance approved sales tools.

Our Long Term Care department will assist you with illustrations, sales support, contracting and case issuance services. Corporate Deductible Long Term Care is a hot topic — our in-house expert can help you find these potential clients in your current book of business.

[www.cpsinsurance.com](http://www.cpsinsurance.com) is a full service website for you, today's prosperous broker. CPS knows business doesn't always take place between the hours of 8AM and 5PM, Monday through Friday. Obtain product information, forms, or status on your pending cases, **24 hours a day, 7 days a week!** At CPS, we have all the tools to help a broker become more successful.

For your benefit, CPS provides top-notch selling tools, such as these advanced planning guides. The resources we provide will make your job easier, saving you time and making you more profitable. Good Selling!

**CPS is:  
Companies, Products, Services.**
